

Dear Guest,

Thank you for choosing Villa Marina Capri Hotel & SPA as a destination for your holidays.

Here are some tips for enjoying a safe stay.

The Mask

The mask represents one of the cornerstones of prevention measures. Its fundamental function is to prevent the dispersion of droplets, which each person normally emits when speaking, sneezing or coughing.

Masks are available at the reception desk.

The use of masks is mandatory:

- In indoor common areas. That is, areas where it is not possible to respect the 1m (3feet) social distancing.

The use of masks is not necessary:

- In Outdoor common areas and at the restaurant table, either indoor or outdoor.
- Inside your room

Use of elevators

The use of lifts is allowed only to members of the same family.

Safe Hospitality. Protect yourself and others from getting sick!

Dear Guest,

since an early diagnosis is one of the cornerstones of the correct management of the SARS-CoV-2 disease, we would like to describe some of the symptoms that, without being cause for alarm, might be deserving of a medical check. The management will be happy to ensure that medical attention is available to you.

Symptoms to pay attention to:

The main symptom is represented by fever: higher than 37,5°C or 99,5°F.

Therefore, each feverish rise of temperature deserves attention, especially if associated with a dry cough, a feeling of pulmonary constriction or even mild respiratory fatigue.

An unusual feeling of tiredness is also a symptom to consider. Loss of taste and/or smell are also evocative symptoms of SARS-CoV-2 infection. Finally, in a smaller percentage of cases, the disease comes with conjunctivitis or diarrhea.

In full respect of your privacy, should you experience the listed symptoms, we guarantee our presence and help.

Social Distancing

Although difficult and sometimes painful, social distancing is a behavioral measure as useful as washing hands and using masks.

Respecting the minimum distance of one meter in all phases of common life is necessary, as well as it is correct to avoid occasional close contact.

For this reason, restricted areas such as elevators have regulated access. Respecting the distancing measures also serves to increase one's level of attention toward many usual behaviors, which could be potentially risky at the moment.

Cleaning and disinfection of hands

Washing your hands frequently with hot water and soap or hydroalcoholic solutions is key to prevention. The hydroalcoholic solution is particularly effective in strongly reducing the pathogenic action of the SARS-CoV-2 virus, hence its transmission through the hands accidentally contaminated by respiratory secretions. You will find containers of hydroalcoholic solution at your disposal through the hotel.
